

UCS X-10 RACK SYSTEM

NEW, MORE COMPACT FOOTPRINT

The X-10 Series Rack System has been designed to provide all the versatility of the X-20 in a smaller, more compact footprint. Designed to accept both olympic and bumper plates, the low-profile plate storage eliminates the need for the vertical weight storage unit, thereby opening up the sightlines of a facility.

- 7-gauge tubing, welded, upright and base construction
- Frame, base, and accessory parts are sandblasted prior to powder-coating, creating the highest possible powder to steel adhesion properties
- Standard Equipment: Low profile bumper plate storage unit, vertical bar sleeves, quick-release single bar holders, a 15" deep spotters area manufactured out of 1/4" steel diamond plate and powder-coated Wrinkle Black. Optional: pull-up bar
- Available in 8' or 9' heights
